TEAM NAME : - ANGHKOOEY

PROBLEM STATEMENT :

Emails sent via Salesforce Marketing Cloud from free domains (Gmail, Yahoo) land in spam due to DMARC policy conflicts, SPF/DKIM alignment failures, and ISP reputation signals. The fix cannot be implemented within SFMC—it requires DNS-level changes. Build a diagnostic and remediation guide/tool that detects misconfiguration and automates SPF, DKIM, and DMARC setup for custom domains.

Email Landing in Spam: Authentication Challenges

PROPOSED SOLUTION:

Domain Security Analysis Process

Web Application Technology Stack
